

## Digital GEMBA Boards

Your Factory Communication Hub

For continuous improvement personnel, a GEMBA Board is one of the main methods used to collaborate and communicate their efforts with the rest of the factory. During a GEMBA Walk, the GEMBA Board is used to show everyone how the factory is performing overall, providing an opportunity to understand issues and develop solutions with input from the entire team. The goal: Work issues to closure with relevant problem solvers in real-time.

The Datanomix Digital GEMBA Board improves on physical GEMBA boards by accelerating mission-critical information from ERP systems to the production floor so everyone sees it and the right people act on it. By connecting to your ERP, Digital GEMBA Boards display real-time metrics and historical drill-downs into any part number, customer, or order with just a few clicks, providing the context necessary for understanding and resolving issues.

The Datanomix Digital GEMBA Board becomes your factory communication hub, with smart TVs displaying up-to-date information at cells across the manufacturing floor. The end result: continuous improvement that soars!

### Real-Time GEMBA

Traditional GEMBA boards require team members to populate key metrics like Safety, Quality, Delivery, Cost, and Inventory by hand on whiteboards or paper. The Digital GEMBA Board is automatically populated in real-time using live data from your ERP system. Click-and-drill into any facet of your business to develop a well-informed action plan. When data comes directly from your ERP, you know it's the most accurate and up-to-date information.

### The New GEMBA Walk

Datanomix delivers a new GEMBA Walk experience. Users approach smart TVs throughout the building, reviewing all the key metrics, jobs, and priorities, allowing the team to form the day's game plan with all of the stakeholders huddled around. Specific details on any jobs, reports, and projects are analyzed on the spot by clicking and drilling down to learn more. Your team gets the right information at the right time to the people who need it.

*"GEMBA is a way of unifying our day-to-day operations and continuous improvement efforts under one umbrella. The Datanomix products have changed the way we manage growth at DFF. We see the KPI's for the entire operation on a single interactive screen and can drill into any facet of the business to form our action plan."* —Bill Marganti, DFF president

## Prioritize Effectively

Manual updates of GEMBA boards are limited not only in the timeliness of the information, but also the level of specificity for each cell and job. Digital GEMBA equips each cell in your factory with an **Operational Readiness Board (ORB)**, a screen that details cell-specific jobs and priorities. ORBs also include up-to-the-second status on all aspects of the job, from materials, to manufacturing, and inspections, helping cells quickly identify issues and avoid delays.

## Insights Everywhere

The Datanomix GEMBA solution includes everything you need to showcase Digital GEMBA Boards on smart TVs in both office areas and around the factory floor, fostering communication that drives productivity. Our Digital GEMBA Board offers a collaborative and interactive experience that reveals insights and engages your entire company in the continuous improvement process, right down to the cell level.

## Plug and Play

Our GEMBA Connect service hooks seamlessly into your ERP database and all of the Digital GEMBA dashboards and reports are fully automated from that point forward. Just continue using your ERP as normal and we deliver real-time updates to your Digital GEMBA Board and ORBs. Datanomix currently supports ShopTech E2, JobBoss and GlobalShop ERP systems, and the system is architected to quickly support other ERP systems.

## The Complete Picture

Digital GEMBA builds on Datanomix's vision for automated production intelligence, automatically compiling metrics that describe important facets of operations and making people aware of whether performance is improving or not (and why). Where the Datanomix next-gen production monitoring platform quantifies job performance using real-time data from CNC machines, Digital GEMBA leverages ERP data to drive intelligence at the factory level. Digital GEMBA can be purchased with Datanomix production monitoring, or as a standalone product.

*"I smile every time I walk past these GEMBA boards knowing how much time and pain they save us from understanding exactly how our factory is doing."*

—Dave Gabanelli, DFF Director of Planning & Processing
