

FAST TRACK DASHBOARD

Get Immediate Answers to Important Production Performance Questions

There are three BIG questions that every manufacturing facility needs the answers to when it comes to running their machines efficiently.

1. WHAT'S HAPPENING TODAY?
2. WHAT HAPPENED YESTERDAY?
3. HOW ARE WE TRENDING?

Chasing the answers to these can be painful (or impossible) because the data is scattered between different people, places, and systems. Not having accurate information definitely impacts production performance—and ultimately profitability.

Datanomix Production Monitoring Software delivers the insights you need to maximize efficiency every day. The **Fast Track Dashboard** is your one-stop shop for answers to those three big questions. It shows you where to focus to meet your goals—and keep trending in the right direction!

WHAT'S HAPPENING TODAY?

Quickly see how the day is going and where to you need to intervene NOW to get jobs back on track. Four tabs display the real-time data for time-sensitive issues.

TIME ON TAP LEADERBOARD

Today's performance for every connected machine across three transition times that can contribute to unplanned downtime: Time to First Active, Break Bleed, and Time From Last Active.

UTILIZATION LEADERBOARD

A ranked order of real-time performance for each machine.

DOWN MACHINES HOT LIST

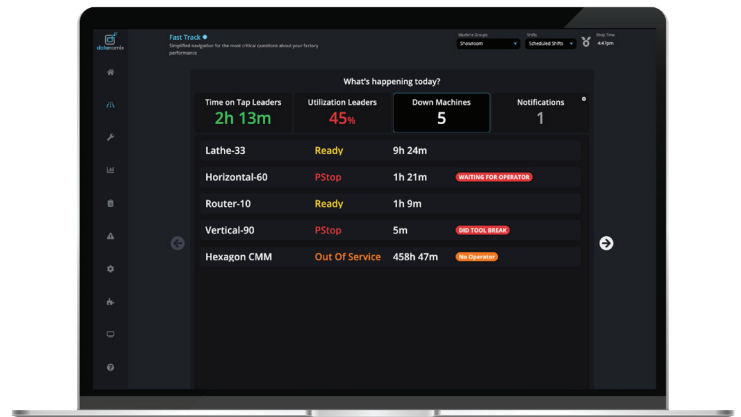

See which machine are down, why, and how long so your team can rally to keep machines running as efficiently as possible.

NOTIFICATIONS TAB

Lists out every notification that happened that day. Quickly scan the list to see where your problems where and if they were responded to promptly.

TIME ON TAP LEADERS

DOWN MACHINES HOT LIST

WHAT HAPPENED YESTERDAY?

This view shows a summary of your shop's performance yesterday and the week in progress. The tabs show you at a glance how your week's performance is going and where you need to focus to achieve your production targets.

TIME ON TAP TAB

Machine downtime during three key transition times; start and end of shifts and breaks.

UTILIZATION TAB

Displays the utilization percentage by machine for yesterday and the week in progress.

ESPRESSO REPORT TAB

Summarizes the prior day's production performance across all machines.

HOW ARE WE TRENDING?

Knowing how performance is trending is critical to validate if new initiatives and corrective actions are working as planned. Three tabs show how performance is trending across a designated timeframe.

UTILIZATION TREND TAB

See how you're trending on the percentage of shift schedule used.

CAPACITY USED TREND TAB

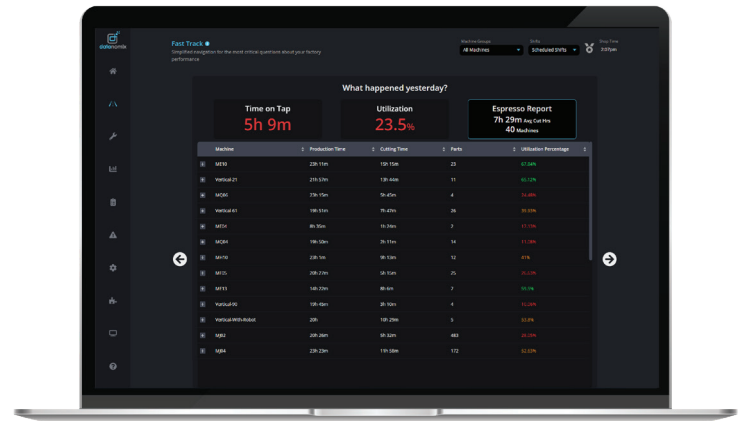

Displays how your planned runtime is trending.

TIME ON TAP TREND TAB

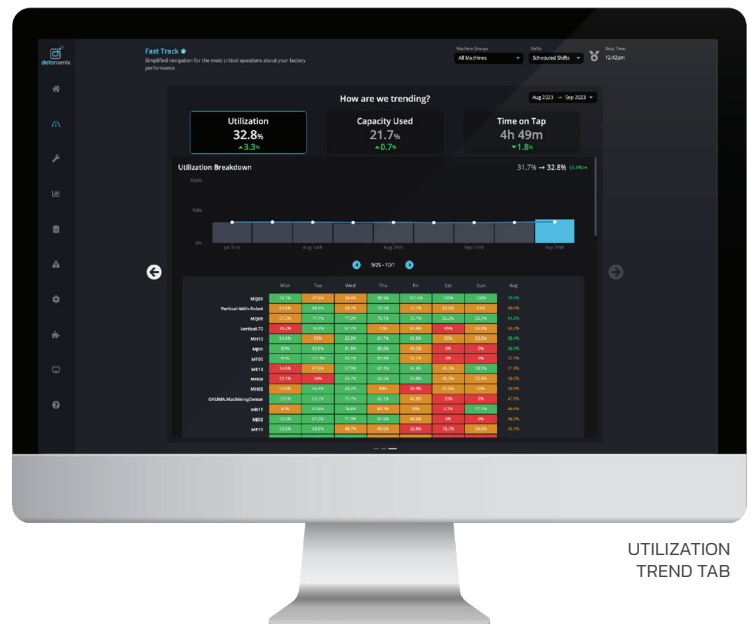

Shows how you are overall and on each of the three key transition times.
