Datanomix Production Monitoring

To make more revenue, using the machines and people you already have, you must optimize your shop's production performance every day. Using manually collected data or your ERP to effectively guide daily decisions is worthless because those methods can only show what's happened in the past—and you can't change that.

Uncover Hidden Capacity

Datanomix provides insights into what's happening right now— while you still have time to do something about it. We connect directly to each CNC machine's controller and collect raw live data, which is then analyzed, scored, and displayed. People on the shop floor can simply look up at large-screen TVs to see where they need to focus, and managers can monitor the entire facility's performance from their mobile device or desktop. All with no operator input required!

THOMAS W. SPRINGER INC.

"Real-time visibility is critical to helping us stay on track to meet our customer's production schedules and address issues immediately."

— **Aaron Springer, VP** —

Kick-Ass Implementation, Service, and Support

Change is hard, even when a product is as easy to use as Datanomix. Your dedicated Customer Success Team works with you to customize the timing of the three phases of your rollout and their associated training. The first phase focuses on maximizing your facility's uptime and sets a new benchmark for performance.

1 Quick Wins Deliver Fast ROI

Every customer starts with three simple workflows that engage every employee and introduce them to the power of real-time data. The average customer sees an additional 60+ minutes per machine / per day from Time on Tap improvements and a double-digit increase in availability. And that's just the start of what Datanomix can help you achieve.

1. STOPPED MACHINES
TVs display every stopped machine, why it's stopped, and for how long.

2. REAL-TIME NOTIFICATIONS
Alerts are sent to mobile devices to show people where attention is needed.

3. TIME ON TAP
Tracking & trending three common times machines are down longer than necessary: Start of shift, around breaks, and end of shift.

2 Setting Goals

After you have established a new benchmark for utilization from the three Quick Wins, Customer Success will work with managers on setting goals and tracking deviations daily, weekly, and monthly to keep maximizing revenue. Powerful reports make it easy to see where the opportunities are:

DOWNTIME PARETO REPORT

Ranks what's causing the most downtime—alarms, program stoppages, tool changes, etc.

CAPACITY REPORT

Analyzes capacity utilization by day or scheduled shifts, and then by work cell or individual machines, to help you identify capacity constraints.

3 Reporting & Continuous Improvement

In the third phase of training, your shop's leadership team will learn how to track KPIs, validate improvements, and identify risks and opportunities to revenue goals.

ROI HUB

Summarizes the return on investment (ROI) results from key performance metrics within a specified timeframe.
